

Balloon Inflation Guide

**GIANT
MARTIN'S®**

Most foil nozzles have a long thin tip for easy insertion into the valve.

Foil Nozzle Types

Use to inflate all foil balloons EXCEPT Orbz®.

Latex Nozzle Types

Use to inflate latex balloons, Bubbles™ and Orbz®.

WARNING!

DO NOT INFLATE foil balloons with the latex nozzle. It has a higher flow of helium which will damage the balloon valve, damage the integrity of the seams or rupture the foil balloon.

- 1 Foil Nozzle
- 2 Latex Nozzle
- 3 Regulator Connector

Foil Balloon Inflation

1
Insert the **FOIL NOZZLE** carefully into the valve opening. Depress the nozzle to begin the flow of helium.

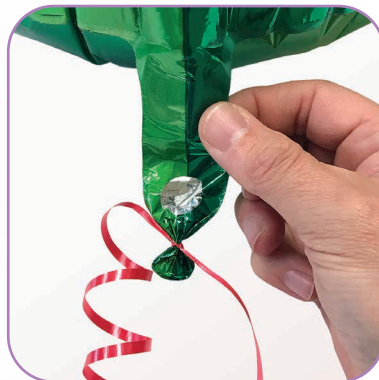

2
Hold the balloon straight when inflating. If the valve is bent, it may become damaged.

3
Inflate the balloon slowly. Allow any smaller parts around the edge to fill before inflating the body completely. Otherwise, the body may become overinflated and damage the seam.

4
Properly inflated balloons should yield slightly when you push on them. If the balloon is not flexible, it is overinflated.

Inflation Tip #1:
Helium expands with heat. In warmer weather, slightly underinflate balloons to prevent breakage.

Inflation Tip #2:
Curling ribbon should be tied below the valve to avoid damage. This allows the balloon to be refreshed if it becomes soft.

Latex Balloon Inflation

- Insert the **LATEX NOZZLE** into the neck of the balloon.
- Fill the balloon until a teardrop shape is achieved.
- Pinch the neck of the balloon and remove from the nozzle.
- Tie a knot in the neck.

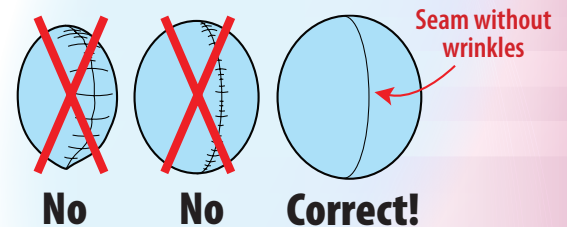

Latex TIP:

Latex balloons inflated with helium have a shorter lifespan than foil balloons. Inflate them only after they are purchased by the customer.

Orbz® & Bubbles™ Balloon Inflation

- Insert the **LATEX NOZZLE** into the valve of the balloon.
- Inflate slowly until the balloon is round like a beach ball.
- When properly inflated the seam will be smooth and wrinkle-free.

Bubbles™ Tip:

Bubbles™ must be inflated as soon as the package is opened to keep the balloon from drying out.

Geometric & Orbz® Tip:

It is normal to hear small popping noises when inflating Orbz® & geometric balloons.
